

Research :

1. [Bennett et al. \(1993\)](#) — Teleporting an unknown quantum state via dual classical and Einstein-Podolsky-Rosen channels
2. [Gottesman & Chuang \(2001\)](#) — Quantum Digital Signatures
Foundational work introducing quantum digital signatures and their security based on quantum physics.
3. [Zhao et al. \(2023\)](#) — Teleportation-based continuous-variable quantum digital signature
Particularly relevant to your project, because it combines quantum teleportation + QDS + fidelity-based analysis.
4. [Wallden & co-authors \(2015\)](#) — Quantum digital signatures with quantum-key-distribution components
→ Studies QDS protocols and information-theoretic security against forging attacks
